Ergonomic Pillow Master Guide

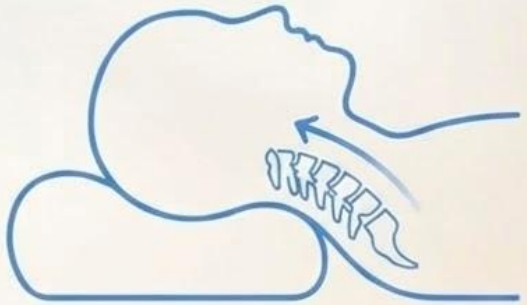

Sleep in True Alignment.
Wake Restored.

RiseByNight

Days 1–3: The Adjustment Phase

- The pillow may feel “new” or unfamiliar
- Neck and shoulder muscles begin rebalancing
- Light soreness is normal — your posture is changing
- Keep using the same contour each night
- Avoid switching back to your old pillow

Bonus: Your body is unlearning years of misalignment.

RiseByNight

How the Ergonomic Pillow Works

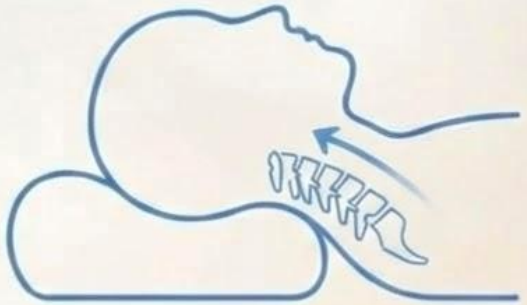

- Supports the neck–shoulder gap precisely
- Keeps cervical spine in neutral alignment
- Reduces micro-awakenings caused by muscle tension
- Enhances airflow & breathing ease
- Helps your body fully relax during sleep

RiseByNight

Days 4–7: Alignment Activation

- Morning stiffness begins to decrease
- Neck muscles start fully relaxing
- Deeper, more stable sleep develops
- Less tossing & repositioning during the night night
- Breathing often feels easier

Bonus: This is when you begin feeling real transformation.

RiseByNight

Week 2: Deeper Sleep, Better Mornings

- Fewer micro-awakenings
- More restorative deep sleep
- Noticeable reduction in neck tension
- Posture begins to stabilize naturally
- Morning clarity & energy increase

Bonus: Your body now recognizes alignment as its new baseline.

RiseByNight

Day 30: Full Ergonomic Adaptation

- Long-term posture improvements
- Stable, correct neck support all night
- Significant reduction in chronic tension
- Deepest sleep achieved
- You wake up restored — consistently

Bonus: 30 days of alignment → long-term transformation.

RiseByNight

If the Pillow Feels Too High

- Switch to the lower contour
- Move the pillow slightly downward
- Keep shoulders fully on the mattress
- Avoid extra layers under your head
- Check your chin — keep it neutral, not tucked

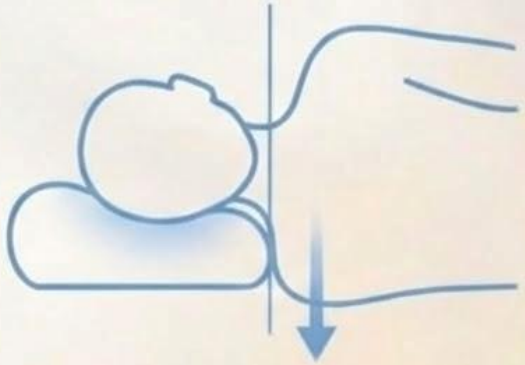

Bonus: High feeling = your neck is being lifted too far from neutral.

RiseByNight

If You Feel Shoulder Pressure (Side Sleeping)

- Pull the pillow slightly into your shoulder
- Use knee support to reduce hip rotation
- Keep chin neutral — avoid curling forward
- Ensure your ear aligns directly above your shoulder
- Let your bottom shoulder “sink” naturally

Bonus: Most shoulder pressure comes from hip rotation or chin tucking.

RiseByNight

If You Roll Out of Position at Night

- Hug a small pillow to stabilize upper body
- Use a knee pillow to lock pelvis alignment
- Avoid sleeping half on your stomach
- Tuck bedding lightly against lower back
- Keep your contour consistently placed each night

Bonus: Your body is learning a new posture — small anchors help.

RiseByNight

Perfect Side Sleeper Positioning

- Neck centered on contour
- Shoulder rests into the pillow channel
- Knees stacked or supported
- Chin neutral — not tucked
- Spine forms a smooth neutral line

Bonus: Small adjustments create huge improvements in comfort.

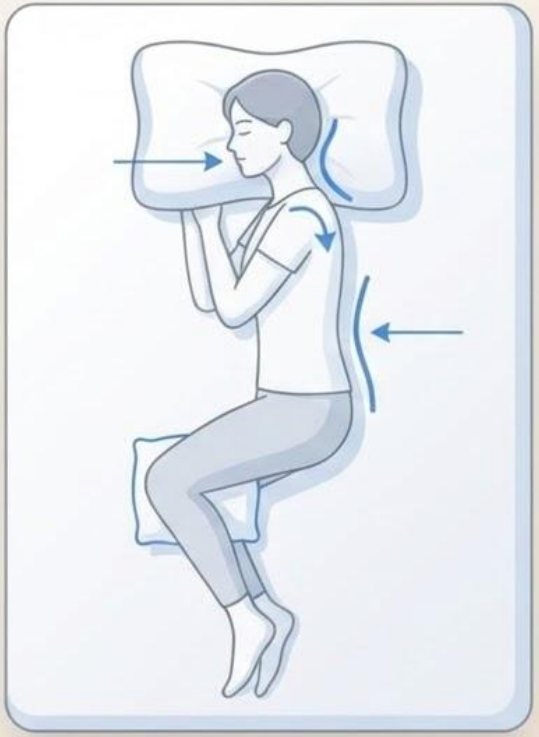

RiseByNight

Perfect Back Sleeper Positioning

- Neck rests in the curved contour
- Pillow does not push head forward
- Natural curve in lower back maintained
- Knees slightly elevated for hip neutrality
- Shoulders relaxed, not lifted

Bonus: Back sleeping + ergonomic contour = optimal cervical decompression.

RiseByNight

How to Choose the Correct Contour

Side Sleepers:

- Use the higher contour for shoulder width
- Shoulder rests slightly under pillow edge
- Keep neck fully supported by the curve

Back Sleepers:

- Use the lower contour for neutral alignment
- Head should not tilt forward
- Neck curve should feel naturally supported

Bonus: Correct contour = instant improvement in comfort.

RiseByNight

Side vs Back: Which Position Is Best for You?

Side Sleeping:

- Best for shoulder/neck pain
- Keeps airway open
- Requires knee support for hip neutrality

Back Sleeping:

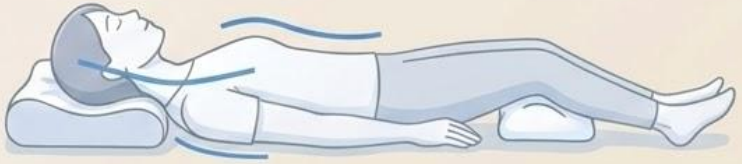

- Best for spine decompression
- Prevents shoulder strain
- Ideal for people sensitive to neck pressure

Bonus: Both positions work — choose the one your body relaxes in naturally.
