Temperature Optimization Optimization Handbook

Unlock Deeper Sleep by Controlling Your Nighttime Temperature

RiseByNight

Why Temperature Matters More Than You Think

- Your body must cool down 1–1.5°C to enter deep sleep
- Overheating triggers micro-awakenings
- Warm rooms disrupt REM and deep sleep cycles
- Bedding can trap heat without you noticing
- Cooler environments = deeper, more stable sleep

Temperature is the #1 external factor affecting sleep quality.

RiseByNight

The Ideal Temperature for Better Sleep

- Ideal room temp: 17–19°C (63–67°F)
- Side sleepers often run warmer → aim closer to 17–18°C
- Men typically run hotter; women fluctuate more
- Summer vs. winter ideal temps vary by 1–2°C
- Cooler temps = faster sleep onset

Find your sweet spot — small adjustments make a big difference.

RiseByNight

Choose the Right Materials for Cool, Deep Sleep

- Cotton: Breathable but retains some moisture
- Bamboo: Excellent airflow, naturally cool
- Linen: Best thermoregulation, ideal for all seasons
- Memory foam: Comfortable but traps heat → pair with cooling layers
- Silk: Temperature-regulating, perfect for masks & pillowcases

Your bedding can make or break your nighttime temperature.

RiseByNight

Cooling Hacks That Work Instantly

- Use breathable bedding (linen or bamboo)
- Keep your room between 17–19°C
- Aim airflow toward the ceiling, not your body
- Take a warm (not cold) shower before bed
- Keep feet slightly uncovered to release heat

A cooler core temperature means deeper, uninterrupted sleep.

RiseByNight

If You Run Cold at Night, Try This

- Layer bedding — thin layers regulate best
- Warm socks help maintain extremity temperature
- Use a heated blanket before bed, not during
- Keep bedroom cool but bedding warm
- Avoid heavy duvets that trap humidity

Warm body + cool room = ideal sleep environment.

RiseByNight

Optimize Airflow for Cooler, Deeper Sleep

- Aim airflow above your body, not directly at you
- Keep windows slightly open for natural circulation
- Position fans to create cross-ventilation
- Avoid heat pockets around the bed
- Cooler air near the floor → better temperature control

Good airflow helps your body maintain an ideal sleep temperature all night.

RiseByNight

Humidity Affects How Hot or Cold You Feel

- Ideal sleep humidity: 40–60%
- High humidity traps heat → restless sleep
- Low humidity dries airways → micro-awakenings
- Use a dehumidifier in summer
- Use a humidifier in winter if air is dry

Balanced humidity = stable breathing + fewer awakenings.

RiseByNight

Your Perfect Cooling Bedding Setup

- Linen sheet + lightweight duvet for airflow
- Avoid heavy comforters that trap heat
- Use breathable pillowcases (linen or bamboo)
- Keep layers thin and adjustable
- Choose moisture-wicking fabrics

Bedding that breathes keeps your core temperature stable through the night.

RiseByNight

Solutions for Hot Sleepers Who Wake Up at Night

- Keep one foot uncovered to release heat
- Use a chilled water bottle near the bed
- Lower room temp by 1–2°C before sleep
- Switch to lighter sleepwear (cotton/linen)
- Avoid spicy food, caffeine, alcohol in the evening

Bonus: Nighttime overheating is common — but fixable with small, consistent habits.

RiseByNight

Solutions for Hot Sleepers Who Wake Up at Night

- Keep one foot uncovered to release heat
- Use a chilled water bottle near the bed
- Lower room temp by 1–2°C before sleep
- Switch to lighter sleepwear (cotton/linen)
- Avoid spicy food, caffeine, alcohol in the evening

Bonus: Nighttime overheating is common — but fixable with small, consistent habits.

RiseByNight

Solutions for Cold Sleepers Who Lose Warmth Overnight

- Layer blankets instead of using one thick duvet
- Warm feet before bed (socks or hot water bottle)
- Keep room cool but bedding warm
- Choose breathable but insulating fabrics (cotton/linen blend)
- Avoid sleeping in heavy clothing — traps moisture

Bonus: Warm bedding + cool air = consistent deep sleep cycles.

RiseByNight

The Perfect Temperature Checklist (0–3 Score)

Rate each category from 0–3:

- Room Temp: Too warm → perfectly cool?
- Bedding: Heat-trapping → breathable + light?
- Airflow: Stagnant → soft cross-ventilation?
- Humidity: Too dry/moist → balanced?
- Clothing: Heavy → breathable + cool?

Score Guide:

- 0–5: Needs adjustment
- 6–10: Improving
- 11–15: Ideal sleep temperature achieved

Bonus: Small tweaks unlock deeper, cooler, uninterrupted sleep.

RiseByNight

If You’re a Hot Sleeper: Your Optimization Plan

- Set room temperature to 17–18°C
- Use linen or bamboo bedding for maximum airflow
- Shower warm → cool down naturally before bed
- Keep feet or hands slightly uncovered
- Avoid heavy meals, alcohol, or caffeine in the evening

Hot sleepers benefit most from breathable bedding + cooler room temps.

RiseByNight

If You’re a Cold Sleeper: Your Optimization Plan

- Layer blankets instead of one heavy duvet
- Warm your feet before bed (socks or hot water bottle)
- Keep room cool (not cold) for ideal sleep quality
- Use breathable but insulating bedding (linen + cotton mix)
- Avoid thick clothing that traps moisture

Comfort layering keeps your body warm without overheating your core.

RiseByNight

Your Perfect Temperature Blueprint

Environment

- 17–19°C bedroom
- Balanced humidity (40–60%)
- Soft cross-ventilation

Bedding

- Linen or bamboo layers
- Light, breathable duvet
- Moisture-wicking sleepwear

Habits

- Warm shower → cool down
- Avoid late caffeine & heavy meals
- Keep lighting dim & warm

Temperature, bedding, and evening habits work together to improve sleep quality.

Your Journey to Cooler, Deeper Sleep Starts Here

- Explore our Ergonomic Pillow for optimal neck & shoulder alignment
- Add the Knee Pillow for improved hip temperature balance
- Sleep darker & cooler with the Mulberry Silk Mask
- Personalize your sleep plan with the Sleep Quiz
- Track progress inside your Sleep Coach
- Build healthy routines with Sleep Logging

Everything you need for the perfect sleep environment — all in one ecosystem.

RiseByNight

Your Journey to Cooler, Deeper Sleep Starts Here

- Ergonomic sleep pillow
- Knee alignment pillow
- Deep Sleep Mulberry Silk Mask
- Personal Sleep Coaching & Daily Sleep Logging
- Sleep Quiz Diagnostic

Everything you need for the perfect sleep environment — all in one ecosystem.
